

DATA MANAGEMENT SERVICES

Green Star's data management services provide a management tool for clients to use in managing their resources, and ongoing projects. Databases allow for quick access to site information, and an efficient and cost effective way to provide data for the decision making process.

Green Star uses professional computerized data management services to aid clients in the interpretation of site-specific environmental data. Green Star can also create, maintain, update, and meet with management staff to discuss ways of improving database and information quality. This full service option translates to significant cost savings by eliminating the client's need to budget for any in-house capital expenditures, associated equipment maintenance, employee training, or re-training when a staff member leaves your organization.

Some other examples of applications used in the data management services include:

- ★ Comprehensive Environmental Project Data Management
- ★ Health Risk Assessment/Risk Reduction Assessment
- ★ Retrieval and Updating of Multiple Site Data
- ★ Statistical Analysis and Data Visualization
- ★ Compliance Assistance

These are just a few of the applications that data management services can be applied. Green Star can create the data management tool to cater to each client's specific needs in managing their environmental projects or programs. The client plays a major role in how they would like their data used in the management process and what type of final products they will require to make the proper evaluation and final decisions. Green Stars data management service provides a vital service tailored to the specific needs of each client.
