

REGULATORY COMPLIANCE REVIEWS

Green Star's Regulatory Compliance Department staff has conducted both limited and broad scope regulatory compliance reviews under a wide variety of protocols, including ASTM, GEMI, and ISO 14000 standards. With a combined experience of over 35 years, Green Star's compliance specialists are knowledgeable in state and federal regulations pertaining to air, water, hazardous waste, and community right-to-know issues. Work scopes for compliance review projects are customized to suit the client's individual needs, and are designed to be cost-effective, and carried out with minimum disruption of facility operations.

Many of our clients are generators of hazardous waste. As such, they are liable for the ultimate disposition of that waste. With such a great potential for liability pending on this issue, all disposal sites to which hazardous waste materials are sent should be carefully evaluated on a regular basis for compliance with federal, state, and local regulations. Green Star's personnel are trained and experienced in evaluating treatment, storage, and disposal (TSD) facilities of all types, and have performed user liability audits of TSD facilities nationwide.

Green Star maintains strict confidentiality regarding facility review procedures. Our staff is accustomed to working with attorneys to assure attorney-client privilege with respect to all findings. All work products are reviewed by senior staff prior to release, and are delivered only to those individuals designated by the client. Reports routinely include regulatory citations and recommendations for corrective action as required.

Green Star's staff has performed regulatory compliance and liability reviews of numerous facilities in virtually every Standard Industrial Classification. Green Star has represented various industries throughout the US for issues including anodizing, electroplating, etched circuit boards, petrochemicals manufacturing, aircraft components and maintenance, and electric power/co-generation. We can assist you with all of your compliance issues.
